The Temate

CHARLES B. DECKNER.

and as agreeable to the palate as it is that letter, I will state that the proper application and the more immediate by inviting to the eye. As a relish, it is time to sow plaster on sod land is from their results. The bulk of manures, at-

After the last transplanting in the hotbeds, leaving the plants eight inches apart, they require but little attention. But of white soils, wherever, as original and timothy hay, onions, sugar heets and term ps and timothy hay, onions, sugar heets and term ps and rutabagas; ponsh for ponators, they require but little attention. But of white soils, wherever, as original and timothy hay, onions, sugar heets and term ps and rutabagas; ponsh for ponators, they require but little attention. The glass may be removed when the -Southern Planter and Farmer. temperature of the atmosphere will permit and only replaced when the nights are cold, or the weather cold and wet. In severe weather additional protection should be afforded by covering the glass with boards, cloth, straw or hay. The great point of success in cultivating the Tomato is in keeping it from the effects of frost and cold, wet weather.

The soil best suited for the Tomato is a dark, warm, sandy loam. If it is rich from having been fertilized the previous year, a light application of ashes er guano will stimulate a quick growth. If the land is poor, apply rotten stable manure havily.

Having been properly prepared, the land to be planted should be laid off in squares, four by four or four by six feet. I prefer the latter dimentions. At the corners of the squares, or where the lines intersect, dig out a hole sufficiently ful as possible on rainy days. large to admit the plant with the soil

apart, may be planted with some vegetable of short duration, such as peas. beans, radish, lettuce, etc. It is necescary that the vines, when well started to growing, should be tied up to stakes. some three feet high, as when allowed to fall upon the ground, any in part con. tact with the soil will take root, thus diminishing productiveness.

To secure a well-flavored Tomato, the fruit should be accomplished by chipping may come to like at least one of them the extremities of the branches. If al-

will as fuller foliage to protect the fruit.

VARIETIES.

My experience has proven the Trophy superior to all other varieties for combination of the qualities desirable for family use. It is large, smooth and well flavored. If there is an objection to be urged against it, it is that it does not ripen so well at the stem as some others. But when size is not sought after, and earliness of maturnity is the chief desideratum, Hathaway's Excelcior is the most desirable variety.

Excelcior is the most desirable variety.

It is large, smooth and the stem as some others. But when size is not publish this for the benefit of all concerned, and as this the season when these parasites sought after, and earliness of maturnity is the chief desideratum, Hathaway's Excelcior is the most desirable variety.

Excelcior is the most desirable variety.

It is large, smooth and other varieties, it is intense bitterness being what kills, it can be said to too as the same board and the same bread and stall, making it, whether it was a rich good and the same bread and stall, making it, whether it was a rich good and the same bread and stall, making it, whether it was a rich good and the same bread and stall, making it, whether it was a rich good and the same bread and stall, making it, whether it was a rich good and the same bread and stall, making it, whether it was a rich good and prices and I guarantee entire avits.

a week earlier than any other. Next in carliness, (and it is a good Tomato too), is the familiar Early Smooth Red.

Rot is caused by long applie of warm.

Rot is caused by long applie of warm.

Private Experiments With Manures.

The numerous inquiries of me regard-The writer has devoted considerable attention to the cultivation of the Tomato, first in the State of Wisconsin and for twelve years past on a market garden near this thriving city. Considered either as a fruit for the table, or as a product for market, it is worthy of high esteem. It is healthful in its effects and as agreeable to the palate as it is and as agreeable to the palate as it is interested to the eye. As a relish, it is at the breakfast table the peer of that delight of the eplcure,—the cantaloupe. Served fresh from the vine, it is palated and wholesome, while it may be served as a cooked dish in half a dozen different styles. In the vegetable season, no table is complete without it, and no canned fruit is more acceptable in winter. Add to the good qualities already mentioned, the immense yield of the Tomato, and it is not surprising that the subject of its culture is receiving so much attention.

The time for planning varies with the climate. The March season of Georgia is the April of New York State. Every
